

Premium Plus System Roller blind

Elegance in large spaces

The Bandalux Premium Plus roller blind system lets large-sized blinds be made with an excellent degree of functionality and precision.

The new decorative embellishments available in five colours completely conceal the mounting supports and offer a more modern look in keeping with the overall dimensions of the blind.

The tones and colours of these new caps also match other decorative components of the blind, such as the chain, crank, tensors and bottom bars.

These new features optimise both the exterior design and the functionality of this new Premium Plus, which continues to be the blind system with most technical solutions for fitting. It is particularly suitable for installation in large windows in buildings of more modern design, reduces the light opening as much as possible and adapts to the openings of multifunction windows.

Options  chain  crank  motor
 spring-assisted chain

General information

Characteristics

Benefits

Updated designs and better finishes

→ More stylized design thanks to the concealing caps for brackets and installations screws.

Common finishes for all three operation systems (chain-operated, crank-operated and motorized).

Five colours available for all decorative components of the blind: white, ivory, grey, brown or black.

New telescopic fitting ends

→ Easy to install for optimum fitting of the blind.

Wide range of bottom bars available

→ Give greater stability to the blind and perfect fabric drop.

New guide system option for exterior with telescopic slides

→ Better adaptation to any brusque movement of the blind due to adverse weather conditions.

Versatility and adaptability of manufacturing

→ Can be made in all the decorative and technical fabrics available in the Bandalux General Catalogue such as Polyscreen®, black-out, fire-proof and darkening fabrics.

Height of commands

Crank

Bandalux has the following recommended control heights for crank-operated blinds:

100cm 120cm 140cm 160cm 180cm 200cm
220cm 240cm 260cm 280cm 300cm

The control height is interpreted taking into account the crank in operating position (not extended).

Chain and spring-assisted Chain

Calculation: blind height H x 0,90.

Blind height with spring-assisted chain H x 0,50.

Example calculation of height:

Blind height H	Height of commands hm	Height of commands hm spring-assisted chain
100cm	90cm	50cm
200cm	180cm	100cm
300cm	270cm	150cm

Due to the action of the mechanism, the control height can never be less than the calculated result.
